Your Security System Needs to be Monitored

Monitoring is an integral part of your home security system. A standard alarm will ring a bell, but a monitored system can save your life. Your monitoring company will perform the vital function of alerting the proper authorities if an alarm situation occurs. If there is a break-in, fire, or medical alert the security system will communicate a signal to the monitoring center who will have the proper authorities on their way within minutes.

Make sure you get monitoring for your alarm system as soon as you move in! Beutler has partnered with Astro Security monitoring, a local company that has been providing support to homes and businesses in your area since 1962! **Contact your Beutler representative to have the Astro Security team monitoring your alarm system as soon as possible.**

➤ **Just the Facts**

Odds are you or someone you know has been burglarized. In fact, statistics show that three out of four homes in the U.S. will be burglarized some time in the next 20 years. According to the Federal Bureau of Investigation, the average property loss in a burglary exceeds \$1,000, and this doesn't take into account damage from vandalism or the emotional toll on the family.

Burglary Facts

- Every 11 seconds burglars break into a house, apartment, or condominium.
- There are an estimated 2.3 million burglaries per year nationwide.
- 65% of all burglaries were residential.
- 60% of residential burglaries occur during the daylight hours.
- 65% of all burglaries were by forced entry.

Fire in the United States

The U.S. has one of the highest fire death rates in the industrialized world. Between 1992 and 2001, an average of 4,266 Americans lost their lives and another 24,913 were injured annually as the result of fire.

- Each year, fire kills more Americans than all natural disasters combined.
- At least 80 percent of all fire deaths occur in residences.
- More than half of home fire deaths result from fires in the 5% of homes with no smoke alarms.
- Homes with smoke alarms typically have a death rate that is 40-50% less than the rate for homes without alarms.

Security Solutions You Can Depend On

- Peace of Mind
- Reliable Equipment
- Local 24-hour Monitoring
- Quick Response from Emergency Personnel
- Builder's Choice

Don't get caught without a security system...

Some things in life are too valuable to risk.

Protect your investment

The most valuable things we have are our family and home. A security system is a deterrent to potential threats to our loved ones. Homes without security systems are 2 to 3 times more likely to be broken into according to studies by the U.S. Justice Department. Most home insurance companies offer up to a 20% discount on your policy if you have a home security system. A basic system is comprised of a keypad, control board, motion sensor, door and window contacts, and a siren to protect your home and family from forced entry, burglary, and fire dangers. Here are some of the tools that can help keep your family safe.

Home Security

Keypad

This is the interface for your security system. You may have multiple keypads in your home that allow you to arm and disarm your system and monitor your system's status.

Motion Detector

Detects movement inside an enclosed structure and is designed to be used in large rooms, narrow corridors, or stairwells. Motion detectors often have a pet immune feature so household pets won't trip the alarm.

Door/Window Contact

This self contained unit utilizes magnetic contacts that activate a continuous alarm when a door or window is opened and deactivates when the contact is closed.

Glass Break Detector

A thin pane of glass offers very little deterrence to a would-be burglar. An effective security system can detect breaking glass, exposing the burglar before he enters your home.

Water & Shock Resistant Pendant Panic Sensor

Allows you to activate a 24-hour emergency alarm whether you're at home, in the yard, or in the shower.

Wireless Key Fob

Wireless key fobs can arm and disarm your system remotely, plus have panic buttons and garage door controls.

Pool Alarms

Monitors entry to pool and sounds an alarm if children, pets, or non-swimmers fall into the pool.

Fire Safety

Smoke alarms go hand in hand with any good security system. The National Fire Protection Association (NFPA) suggests that you install at least one smoke alarm on every floor of your home and outside each sleeping area. Beutler installs smoke alarms and heat detectors that tie-in to your security system. With monitoring, not only will they alert you of fire danger, they can also alert the proper authorities and have help on the way!

Smoke Detectors

A smoke detector detects the products of combustion. Beutler uses smoke detectors that provide maximum smoke detection and are reliable for all smoke flow directions and velocities.

Chemical Heat Detectors

Heat detectors compliment smoke detectors and are used in areas (such as kitchens) where smoke detectors may be tripped by non-threatening smoke. A heat detector is activated when a certain temperature range is exceeded.

Carbon Monoxide Detectors

Often called the silent killer, carbon monoxide is an invisible, odorless, colorless gas created when fuels (such as gasoline, wood, natural gas, and propane) burn incompletely. In the home, heating and cooking equipment that burn fuel are potential sources of carbon monoxide. According to the National Safety Council, 400 gas-poisoning deaths occurred in 2000, 300 of them in homes.
