According to the American College of Allergists, as many as 50% of all illnesses are caused or aggravated by indoor air pollution. Dizziness, headaches, nausea, allergies, and asthma can all be triggered by poor indoor air quality. Opening windows to let fresh air in isn't the best option- not only does it compromise the safety of your home, it can take hours for the fresh air to get inside and the pollens that come with it can compromise the health of your family.

To combat the problem, new homes are now required to provide a fresh air source.

Outdoor Air Naturally Fresh. Naturally Cool. Naturally Healthy.

SmartVent Plus is a safe, reliable, fresh air source for healthy indoor air. SmartVent Plus even goes a step further and will help you use less energy, saving you money. Smart!

Improving Your Indoor Air Quality Year-Round

SmartVent Plus® provides you with fresh, healthy outdoor air minus the allergens that can come with it- so you can breathe easy in your home. Our patented controller works with your heating and air conditioning system to filter and circulate naturally fresh, healthy outdoor air throughout the home all year round. This fully integrated system operates automatically with all your windows and doors secured.

Unlike other airflow systems that can draw air into the home from unwanted and unfiltered sources such as the garage or attic, **SmartVent Plus**® brings the air in from a known location on the roof, passing the air through the filter before it enters the home.

In addition, depending on the temperature outside, the air may be conditioned with the furnace or air conditioner before it's distributed with the duct system into every room, providing you with the health benefits you desire **PLUS** the comfort you deserve no matter what the weather is like outside.

Using the Cool Outdoor Air to Your Advantage

In addition to providing you with a healthier home, **SmartVent Plus**® can be used as an energy saving tool. Here in Northern California, even after a sweltering summer day, the evening air often cools down quickly and we are treated to wonderfully comfortable evenings, often times delivered to us on a cool Delta Breeze. The SmartVent Plus system uses this naturally cool air to your advantage.

The **SmartVent Plus**® controller monitors indoor and outdoor temperatures and determines when the outdoor temperature is lower than the indoor temperature by a difference of 4°-9° F (adjustable range). When conditions are right, **SmartVent Plus**® turns on the furnace fan and activates a vent damper, allowing cool, fresh air to flow into the home traveling through your ducts and filtration system (blue arrows). At the same time the warm, stale air (red arrows) is vented out through the attic, reducing heat build-up. This feature saves you money with reduced air conditioning usage while allowing you to take advantage of the cool healthy fresh air.

Find out what thousands of homeowners already know! **SmartVent Plus**® is Villara's most popular option.

Here's what people are saying about

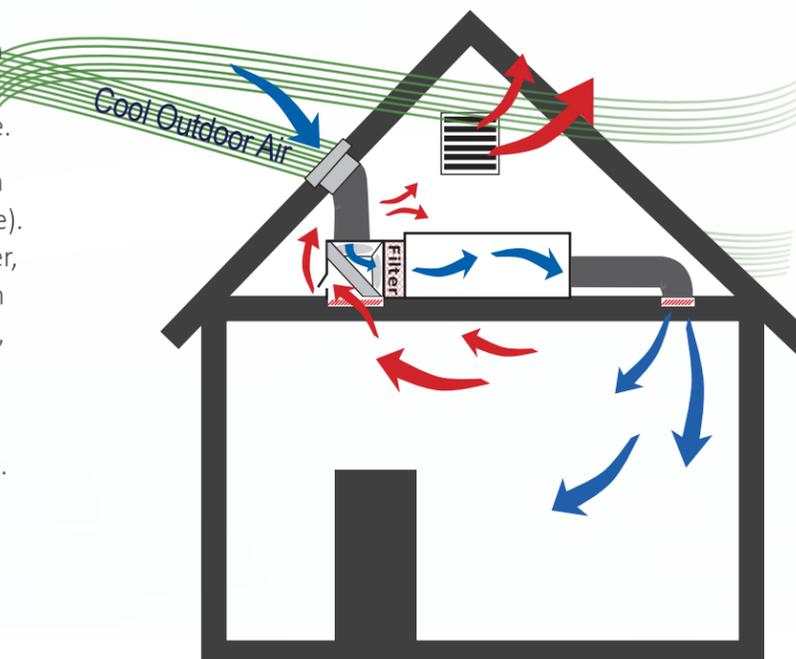

"We didn't need to kick on the A/C system and our home was always cool thanks to SmartVent."

"There was no sacrifice in comfort and we reduced our energy use right away - wow!"

"Saving energy means saving money - a smart choice for sure"

"So easy - so cool. It just makes sense!"

"Fresh air is FREE - what a novel concept!"

Benefits of

Healthy Indoor Air

Fresh, filtered air that maintains healthy indoor air conditions year-round.

Increased comfort and lower indoor air temperatures

The ultimate in comfort and convenience, the intelligent design of the **SmartVent Plus**® works with your air conditioner, or operates on its own, automatically.

Improved indoor air quality

The unique vent damper simultaneously switches between indoor & outdoor air flows, allowing stale indoor air to be exhausted through the attic, cooling it while it cools your living space.

Reduced air conditioning costs

Using the cool outdoor air to cool your home reduces the need to run your air conditioner - saving you money. Purging hot attic air with spent indoor air reduces heat build-up and the amount of energy required to maintain a comfortable temperature in your home.

Enhanced Security

SmartVent Plus® allows you to keep your windows closed and doors locked while cooling your home with fresh, filtered outdoor air.

Easy to Operate

Automatic & manual operation modes.

Quiet, integrated operation

Great for sleeping.

Easy maintenance

Only one filter to clean or change.

*The ultimate in
comfort, efficiency,
and healthy indoor air*
